What's New In TinyClock?

TinyClock for Windows is a small, yet useful application to keep track of time. Time display The time can be accessed from any place on the screen and adjustments can be carried out instantly. For example, the hour and minute can be adjusted to display current time, as well as year, month and date. In addition, TinyClock can come in handy if you are using a projector or a similar technology, as it can track the time so that you don't have to adjust the lights or the remote to wake up the audience. Configuration The built-in configuration menu lets you set your time format, choose whether to display the time in AM or PM, and configure other parameters such as the language and date format. Other features Apart from time-related functions, TinyClock provides you with a diverse collection of tools, including alarms. You can work out the time of day, set up alarms to wake up or to remind you to set an alarm, and make use of macros. The Hotkeys feature enables you to have up to six keys assigned to keyboard shortcuts for many options. You can also have background sounds, change volume, or change the color of the clock. The application is very easy to set up, as it doesn't require any background installation. The user interface is very straightforward and offers a lot of options that will meet most of your needs. To sum things up, TinyClock for Windows is a useful application designed specifically for helping you keep track of time in various ways. It is extremely easy to set up and use, but it doesn't have any additional features that would make it even more useful. If you are in need of a timekeeping utility that you can trust and use, then TinyClock should be the tool for you.
